TISSUE SPECIFICITY: Strongly expressed in prostate, liver, kid breast and penis. Also expressed in pancreas, esophagus, stoma deodenum, colon, trachea, lung, salivary glands and fallopian tube. PSP94 is expressed in lung and breast, whereas PSP57 is found in kidney and bladder.

MISCELLANEOUS: SPECIFIC RECEPTORS FOR THIS PROTEIN ARE FOUND CSPERMATOZOA AND IN THE PROSTATE.

SIMILARITY: Belongs to the beta-microseminoprotein family.

"Listeriallysin genes: complete sequence of ilo from Listeria ivalence of form Listeria seeligeri.";

and of lso from Listeria seeligeri.";

Biochim. Biophys. Acta 113:81-94(1992).

-i- FUNCTION: SULFHYDRYL-ACTIVATED TOXIN. IS ABLE TO LYSE CHOLES:

CONTAINING MEMBRANES. CAN BE REVERSIBLY INACTIVATED BY OXIDA:

CHOLESTEROL IS THE RECEPTOR FOR THE BINDING OF THESE TOXINS:

EUKARYOTIC CELL MEMBRANES.

-i- SIMILARITY: Belongs to the thiol-activated cytolysin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               01-JUL-1993

-!- CATALYTIC ACTIVITY: ATP + L-methionine + tRNA(Met) = AMP diphosphate + L-methionyl-tRNA(Met).
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: Belongs to class-I aminoacyl-tRNA synthetase.
-!- SIMILARITY: Contains 1 tRNA-binding domain.
                                                                                                                                                                                                                                                                                                                                                                                                                    between the Swiss Institute of Bioinformatics the European Bioinformatics Institute. "Purification and characterization of seven chloroplast ribosomal proteins: evidence that organelle ribosomal protein genes are functional and that NH2-terminal processing occurs via multiple pathways in chloroplasts.";

Plant Wol. Biol. 20:459-465(1992).

-I- FUNCTION: This protein binds directly to 23s ribosomal RNA and is necessary for the in vitro assembly process of the 50s ribosomal subunit. It is not involved in the protein synthesizing functions of that subunit (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SEQUENCE FROM N.A.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Score

RESULT 1 US-07-899-535A-1

Sequence 1, Appli Patent No. 542801

Application US/07899535A

GENERAL INFORMATION:

APPLICANT: Sheth, Anil R. APPLICANT: Garde, Seema APPLICANT: Panchal, Chand

CORRESPONDENCE

ADDRESS:

NUMBER OF SEQUENCES:

APPLICANT: Panchal, Chandra J.
TITLE OF INVENTION: Pharmaceutical Preparations For
TITLE OF INVENTION: Inhibiting Tumours Associated With Prostate
TITLE OF INVENTION: Adenocarcinoma, Stomach Cancer and Breast Cancer.

```
COUNTIF: 2220

COMPUTER READABLE FORM:
MEDIUM TYEE: Floppy disk
MEDIUM TYEE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PATENTIN Release #1.0, Ve
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/07/899,535A
FILING DATE: 16-JUN-1992
CLASSIFICATION: 1514
ATTORNEY/AGENT INFORMATION:
NAME: Loud, George A.
REGISTRATION UNMBER: 25,814
REFERENCE/DOCKET NUMBER: S&B-A835
TELECOMUNICATION INFORMATION:
TELESPHONE: 703-415-0960
TELESTA: 703-415-0962
TELESPAN: 703-415-0962
